EXAMINER'S AMENDMENT

An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

The application has been amended as follows:

Cancel claims 29 and 35-46.

Election/Restrictions

This application is in condition for allowance except for the presence of claims 29 and 35-46 directed to groups II,III, and IV non-elected without traverse. Accordingly, claims 29 and 35-46 have been cancelled.

Allowable Subject Matter

Claims 1-28 and 30-34 are allowed.

The following is an examiner's statement of reasons for allowance:

Claims 1 and 31 recite "a plurality of planar ion transport membrane modules disposed in the interior of the pressure vessel and arranged in series, each membrane module comprising mixed metal oxide ceramic material and having an interior region and an exterior region, wherein any inlet and any outlet of the pressure vessel are in flow communication with exterior regions of the membrane modules". Prasad et al(5733435) teaches combining an ion transport membrane and a mixed conductor

membrane in a multiple stage system(column 7 lines 59-67). However, Prasad et al fails to teach a plurality of planar ion transport membrane modules disposed in the interior of the pressure vessel and arranged in series. Balaachandran et al (5536728) teaches a cross flow reactor having an array of reactor cells in parallel downstream of an inlet manifold, the reactor cells including an oxygen permeable material having oxygen ion conductivity(column 7 lines 32-37). However Balaachandran et al fails to teach a plurality of planar ion transport membrane modules disposed in the interior of the pressure vessel and arranged in series, each membrane module comprising mixed metal oxide ceramic material and having an interior region and an exterior region, wherein any inlet and any outlet of the pressure vessel are in flow communication with exterior regions of the membrane modules. It would not have been obvious to someone of ordinary skill in the art at the time of the invention to provide a plurality of planar ion transport membrane modules disposed in the interior of the pressure vessel and arranged in series, each membrane module comprising mixed metal oxide ceramic material and having an interior region and an exterior region, wherein any inlet and any outlet of the pressure vessel are in flow communication with exterior regions of the membrane modules because neither Prasad et al nor Balaachandran et al suggest such a modification. Claims 2-26 depend on claim 1 and hence are also allowed. Claims 32-34 depend on claim 31 and hence are also allowed.

Claim 27 recites "a plurality of planar ion transport membrane modules disposed in the interior of the pressure vessel and arranged in a series of banks of modules".

Prasad et al(5733435) teaches combining an ion transport membrane and a mixed

Art Unit: 1724

conductor membrane in a multiple stage system(column 7 lines 59-67). However, Prasad et al fails to teach a plurality of planar ion transport membrane modules disposed in the interior of the pressure vessel and arranged in a series of banks of modules Balaachandran et al (5536728) teaches a cross flow reactor having an array of reactor cells in parallel downstream of an inlet manifold, the reactor cells including an oxygen permeable material having oxygen ion conductivity(column 7 lines 32-37). However Balaachandran et al fails to teach a plurality of planar ion transport membrane modules disposed in the interior of the pressure vessel and arranged in a series of banks of modules. It would not have been obvious to someone of ordinary skill in the art at the time of the invention to provide a plurality of planar ion transport membrane modules disposed in the interior of the pressure vessel and arranged in a series of banks of modules.

Claim 28 recites "a plurality of ion transport membrane modules disposed in the interior of the pressure vessel and arranged in series, each membrane module comprising mixed metal oxide ceramic material and having an interior region and an exterior region, wherein any inlet and any outlet of the pressure vessel are in flow communication with exterior regions of the membrane modules". Prasad et al(5733435) teaches combining an ion transport membrane and a mixed conductor membrane in a multiple stage system(column 7 lines 59-67). However, Prasad et al fails to teach a plurality of ion transport membrane modules disposed in the interior of the pressure vessel and arranged in series. Balaachandran et al (5536728) teaches a cross flow reactor having an array of reactor cells in parallel downstream of an inlet

Art Unit: 1724

manifold, the reactor cells including an oxygen permeable material having oxygen ion conductivity(column 7 lines 32-37). However Balaachandran et al fails to teach a plurality of ion transport membrane modules disposed in the interior of the pressure vessel and arranged in series, each membrane module comprising mixed metal oxide ceramic material and having an interior region and an exterior region, wherein any inlet and any outlet of the pressure vessel are in flow communication with exterior regions of the membrane modules. It would not have been obvious to someone of ordinary skill in the art at the time of the invention to provide a plurality of ion transport membrane modules disposed in the interior of the pressure vessel and arranged in series, each membrane module comprising mixed metal oxide ceramic material and having an interior region and an exterior region, wherein any inlet and any outlet of the pressure vessel are in flow communication with exterior regions of the membrane modules because neither Prasad et al nor Balaachandran et al suggest such a modification. Claim 30 depends on claim 28 and hence is also allowed.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Application/Control Number: 10/635,695
